

With the decorative sill you get also:

- + An ALTERNATIVE to shower trays
- + Opportunity to use shower trays according to your wishes
- + Quality of the material ensuring a stable installation of any kind of vertical constructions /in terms of shape, size and mass/, shaping the space under the shower.
- + A new aesthetic, functional and long-lasting bathroom solution regardless whether you place a standard or non-standard decorative sill or simply curtain
- + Wide diversity of colours, shapes and lengths

Hardiness: Tests performed by the producer FAT Ltd., show that polymer products with the commercial brand FAT are resistant when in contact with acetylene, acetic acid, ethanol, sodium hypochlorite, acetone, ammonia, caustic soda, all bathroom cleaners /without abrasives/, hair colour and shoe shine cream, coca cola, red wine, cooking oil, coffee, tea and other. Tested resistance to dry heat is 150° C.

Material: Polymer marble is mainly marble flour / \approx 80%/ and polyester resin. The coating is transparent sanitary acid-resistant Gel Coat.

Mounting Instructions:

- + Use a tile adhesive; fill the sill's cavity with it in order to achieve better adhesion to the floor.
- + We recommend installation before you stick tiles to the floor. If the length of the decorative sill needs to be adjusted, you can use an angel grinder (with any type of blade). Level the threshold well, and then stick the tiles, giving a slope in the necessary directions for proper drainage.
- + When installing on already completed floor, correct any displacement, determined by the slope of the floor.
- + Precise levelling of the sill is important for the proper mounting and use of vertical decorative shower sill.
- + If necessary, joint where needed with the appropriate colour.
- + In case of bigger base displacement, adjust the height of the sill at the bottom with sanding to ensure a flat surface for mounting of partition elements.
- + According to your preference, you can put an extra strip of decorative ware /inside corner type/ outside the sill.
Then on the fixed sill you can mount any kind of vertical decorative sills /by following the instructions of the producer/ including those, requiring re-drilling of the base, that is, of the sill/.

Instructions for use and maintenance of FAT decorative sill

Decorative sill with the commercial brand FAT is designed to separate shower trays in order to prevent water pouring on the bathroom floor. To achieve optimum product functionality it is necessary to use it only as intended.

The consumer has to follow the instructions for use and maintenance, provided by producer, as that would ensure longer working life and better vision of the product.

It is recommended that the product surface is wiped with dry cloth after use in order to prevent the calcareous deposits and spots. If spots remain, remove them with a soft sponge or cloth, with any of the dish washing chemical detergents, available on the market (except abrasive based ones).

- ! Accidental dropping of heavy and/or sharp objects can damage the product.
- ! The use of abrasives or abrasive cleaners, leading to wearing out of the coating, is forbidden.
