# FAT<sup>®</sup> MOUNTING INSTRUCTIONS for composite kitchen sink

**Material:**

**Polymermamor (Cast Marble)** – composite material with main ingredients natural marble powder (80%) and polyester resin. The coating is a transparent, chemical resistant sanitary gel-coat.

**Granixit** – composite material with the same basic ingredients as by Polymermamor, but in the gel-coat covering are added specific granules with high hardness and great color variety. This additive provides higher resistance to chemical and mechanical influences and enables great color diversity.

**FAGRANITE** is a composite material of 80% natural quartz /the hardest part of the granite/ and 20% resins.

**Instructions for use and maintenance of the kitchen sinks FAT**

Dear customers,  
The compliance with the instructions for use and maintenance will provide a long life and good vision for your sink.

**Cast Marble/Granixit sinks**

- The heavy kitchenware often has rough/sharp surfaces and edges – use a suitable protective pad to protect the sink bottom
- Falling of sharp and heavy objects in/on the sink can damage its surface.
- Do not place hot kitchenware directly from the oven on the sink – risk on damage for the surface coating.
- Clean the sink with a soft sponge and dish soap, then rinse with warm water
- Wipe with a soft dry to prevent the formation of limestone and stains.
- For persistent stains, rub the area with a soft sponge, using any cleaning agents(without abrasive) or agents for limestone cleaning available on the market. After finish the cleaning rinse sink thoroughly with water.

**ATTENTION: Do not use any abrasive materials or sharp objects for cleaning the sink – it may damage the surface. The specific lay-up of the Fat sinks does not allowed the generation and retention of contaminants.**

**Cleaning and maintenance of FATGRANIT composite sink**

MAINTAINING A GRANITE SINK IS EASY IF YOU CLEAN IT REGULARLY WITH THE CLEANING DETERGENTS USUALLY USED IN YOUR HOUSEHOLD.

- The longer the stains stand on the sink's surface, the more difficult it would be to get rid of them.
- Here are some recommendations from us for the remaining visible pollutions, traces of scratches, colourings or spots.
- To remove grease deposits from the bottom and walls of the sink, use the standard dishwashing detergent and a soft sponge, then rinse thoroughly and dry.
- To remove any other stains or scale deposits, apply anti-scale detergent evenly on the coated places, let it sit for about 5 minutes, then rinse thoroughly and dry.
- To remove traces and scratches formed from metal utensils on the sink's surface, as well as for treating especially stubborn stains, use abrasive dry or creamy household detergent. Wipe dry and apply the detergent on the affected area and let it sit for 5-10 minutes. With the abrasive side of a household sponge, rub the surface thoroughly using a circular motion(if necessary apply pressure). Rinse with water and wipe dry.
- Caution: Do not use aggressive chemicals such as concentrated caustic soda, formic acid, etc. on this base, as well as highly corrosive preparations - there is a risk of surface damage or change of color.**

**Instruction for drilling faucet holes**

- Remove the sink from the box, and place with face heading up, on a stabile surface.
- Faucet holes will be perforated before installing the sink into the kitchen worktop.
- Kitchen sinks FAT have pre fixed faucet holes. Choose the ones you prefer.
- With the sharp edge of a small hammer hit a few times only in the marked center.
- !!!Perforating the sink/knocking the marked center will take place only on the upper side surface (face of the sink).**
- Continue knocking with light hits from center of the hole to the edge of it, until forming the final form of the hole.
- Leftover pieces of material/dust may be smoothed with sand paper, sand razor, or any appropriate abrasive.
- If, after perforating the faucet hole is wished re-packing and transporting the product, it is needed to clean the functional side of the sink.

**Instruction for installation the sink in the kitchen countertop**

- Place the paper template on the countertop and draw the contour.
- The cutting process have to be made inside the marked contour /so that line remains visible on the worktop/, use an electric chainsaw. Make first a hole in one of the corners of the contour, then continue with cutting from this hole.
- Check by placing the sink in the newly formed opening whether it meets the sink's dimensions, if ok -remove the sink and clean both contact surfaces - of the sink and the kitchen board with degreaser/alcohol. Carefully apply silicone (we recommend only transparent sanitary silicone) on both surfaces.
- Place the sink carefully into the opening, press, and level it with the wall or the countertop.
- Cut the remains of the silicone adhesive with a spatula or any other instrument not very sharp. Pay attention at the integrity of the kitchen board during mounting.
- After few minutes clean entirely the adhesive/silicon traces from the board. If necessary clean with a soft cloth.
- After the final drying of the silicone adhesive (please check the drying time on the package) you can use the sink.

**Mounting instruction for undermount sink /product code 221, 222, 232/**

- Use the paper template for correct drawing the place for cutting on the kitchen worktop.
- Cut the kitchen worktop with a proper instrument according the material of the worktop.
- For fixing the sink use polyurethane glue, follow thee instructions of the producer of the glue for the relevant material of your worktop.

**Mounting instruction for module sink /product code 218 and 219/**

- When having kitchen modules with the side measurements of 50/55 cm, mount-it according to the below instructions /from points 3 to 5/.
- When having kitchen modules with the side measurements of 45 cm, remove the protection, plank/backboard (if necessary), which is placed in the back side of the module (if there).
- Clean the down side of the kitchen sinks with a soft cloth and spirit/alcohol.
- Apply a layer of silicone/adhesive on the upper side of the module (after being cleaned) and place the sink.
- Connection between board and sink shall be made with a standard aluminum decorative profile and silicone/adhesive.
