

**BALM***for composite granite sinks*

EN

**APPLICATION:**

The surface of the sink must be well cleaned and dried. Apply an evenly thin layer of the product using a clean, soft and lint-free cloth. Rub and polish well – so that it dries and does not remain on the surface. Avoid contact of the balm with the surfaces that will not be treated (especially glass and metal).

**IMPORTANT NOTES:**

It is recommended to test the product on a small and hidden surface before using it. Avoid direct sunlight on the treated area. After applying the product, the surface of the sink should not be wet for at least 2-3 hours.

**INGREDIENTS:**

Polydimethylsiloxane, water, nonionic surfactants <10%, parfume.

**CONTENT:**

300 ml. art. N: 29945

**MANUFACTURER:**

Produced in EU for FAT Ltd.

**PRODUCT FOR CLEANING***of composite granite sinks*

EN

**APPLICATION:**

Apply the product on the contaminated surface, using the abrasive part of an ordinary kitchen sponge. Rub well and leave on for 15 - 20 minutes, then rinse thoroughly with water. If necessary, repeat the procedure for particularly stubborn stains.

**IMPORTANT NOTES:**

The preparation is intended for regular cleaning of the granite sink from typical household dirt in the kitchen - grease, food stains, coffee, tea, wine, etc. similar.

**ATTENTION:**

If scale deposits have accumulated on the surface of the sink, first remove them using commercially available products for this purpose (e.g. Domestos, etc.).

**INGREDIENTS:**

Water, Postassium hydroxide <5%, anionic and nonionic surfactants <5%, corrosion inhibitors, sequestrants
